

WHAT IS CLAIMED IS:

1 1. A vacuum tank assembly comprising:
2 a vacuum tank having a substantially hollow interior and an exterior having
3 top, bottom, and front surfaces;
4 a dip tube assembly mounted in said first opening in a position such that
5 sewage in said tank may be readily withdrawn therefrom adjacent said bottom
6 surface thereof, and constructed to readily connect to a vacuum pump; and
7 wherein said dip tube assembly comprises an adaptor and an evacuator
8 component, said adaptor connecting said evacuator component to an outlet conduit
9 or vacuum pump, and said evacuator component comprising a substantially tubular
10 evacuation portion having a substantially flat open bottom closely overlying said
11 tank bottom surface in said tank interior.

1 2. An assembly as recited in claim 1 wherein said evacuator component has
2 at least one radially extending locator tab; and further comprising at least one cut
3 out in said tank front surface adjacent said first opening cooperating with said tab to
4 properly orient said evacuator component in said tank.

1 3. An assembly as recited in claim 2 wherein said locator tab has a
2 substantially polygonal cross-section and is removably mounted to said evacuator
3 component.
